Location: Nottingham, MD
Date: 2025-11-10

Scope

Executed manual testing on the SauceDemo e-commerce site covering Login, Add to Cart, Checkout, and Logout modules. Focus included positive and negative scenarios, basic UI validation, and end-to-end user flows.

Metric	Value
Total Test Cases	6
Passed	5
Failed	1
Defects Logged	3 (High: 1, Medium: 1, Low: 1)

Highlights

- Validated critical path (login → add to cart → checkout) successfully.
- Found cart badge inconsistency when adding items quickly.
- Observed layout overlap on checkout in narrow viewports.
- Documented locked-out user error with clear repro steps.

Recommendations

Prioritize fixing cart badge count accuracy (P1). Review error messaging and UX copy for locked-out scenarios (P2). Tidy layout overlap on checkout to improve readability (P3). Add lightweight API checks to reduce UI flakiness.
